

California School Dashboard Overview

Welcome to the California School Dashboard. This tutorial will highlight the features of the Dashboard and other resources available on this Web site.

When you access the California School Dashboard the first page you see is the Home Screen. This page contains a search bar and links to resources such as the fast-start guide.

You can search for a district or school by typing the name into the search bar. Select the Search button and then select the school or district from the resulting list.

Once you have selected a school or district, the Dashboard will be displayed on the screen. It displays basic information.

There are four different reports on the Dashboard. The first report is the Equity Report which displays the performance level on all state indicators, as well as information about how all students are performing.

The Equity Report will also display the local indicators for districts and charter schools only.

The other reports can be accessed using the navigation tabs directly above the indicator information.

The Status and Change Report shows the status (how schools or districts performed this year) and change (how their performance changed from last year) for all the state indicators.

Selecting a state indicator will bring up detailed information about student group performance on that indicator.

The Detailed Report shows information about performance over time, up to three years of data are available.

The final report available on the Dashboard is the Student Group Report. This report provides the performance levels for all the state indicators across student groups.

If you would like to see how all schools in a district are performing on the state indicators, select the List of all schools in the district at the top of the report. It is important to know that charter schools are considered their own districts and will not be include in this list.

Thank you for watching this short tutorial on the California School Dashboard.
